

POS

Your Point Of Sale Solution

RetailPOS™ version 2.4 from **e-docs solutions & consultants** is a complete Point-of-Sale, inventory control, customer-tracking software solution that seamlessly integrates with Windows® 98/2000/NT/XP. Using state-of-the-art bar code printing and reading technology, RetailPOS™ tracks sales, customers, and physical inventories quickly and efficiently. RetailPOS™ has [features](#) that make retailers more successful.

We were commissioned by a MNC company to develop RetailPOS™ software for use in their retail operations. Their Loss Prevention Department evaluated the top POS packages on the market, of which all failed their security criteria. We've been fortunate to have these Specialists on our side designing the security aspects of our software. If you are concerned about your inventory quantity on hand (QOH) figures, employee accountability and full auditing features then, RetailPOS™ is right for you.

By running a few reports you'll be able to quickly identify fast turning and profitable inventory items as well as slow moving and low margin items. By reviewing information on the screen or printing out a report, you'll be able to quickly adjust your stocking levels, for all twelve months, to reflect your future sales. What better way to set your inventory levels then reviewing the sales history of an item. You'll be able to spot trends and seasonal items more easily, then walking the shelves and monitoring the dust levels. RetailPOS™ carefully monitors your stocking levels to make sure you have the right amount of stock on hand.
